

# Technical Specification Sheet

**TSB, Modified w/8 mg/L Novobiocin & ADC**  
**SKU: 700003255, 700003256, 700003257, 700003258**  
**NCM0101**

## Intended Use

Tryptic Soy Broth, Modified with Novobiocin & Acid Digest of Casein is used for the selective enrichment of enterohemorrhagic *E. coli* in foods. Conforms to USDA Formulation with Novobiocin supplementation in a laboratory setting. Tryptic Soy Broth, Modified with Novobiocin & Acid Digest of Casein is not intended for use in the diagnosis of disease or other conditions in humans.

## Description

The first major outbreak of *E. coli* O157:H7 was in 1982, and traced to contaminated hamburgers. Other known sources of infection include sprouts, lettuce, salami, unpasteurized milk, juice and/or swimming in or drinking contaminated water. Tryptic Soy Broth, Modified with Novobiocin & Acid Digest of Casein is used to enrich food samples suspected of having low levels of EHEC during pathogen testing.

## Typical Formulation

Enzymatic Digest of Casein	17.0 g/L
Acid Digest of Casein	10.0 g/L
Sodium Chloride	5.0 g/L
Dipotassium Phosphate	4.0 g/L
Enzymatic Digest of Soybean Meal	3.0 g/L
Dextrose	2.5 g/L
Bile Salts No. 3	1.5 g/L
Novobiocin	0.008 g/L

Final pH: 7.4 ± 0.2 at 25°C

Formula is adjusted and/or supplemented as required to meet performance specifications.

## Precaution

Refer to SDS

## Preparation

1. Dissolve 43.008 g of the medium in one liter of purified water.
2. Mix thoroughly.
3. Autoclave at 121°C for 15 minutes.

## Quality Control Specifications

**Dehydrated Appearance:** Powder is homogeneous, free flowing, and light to medium beige.

**Prepared Appearance:** Prepared medium is brilliant to clear, none to light precipitate, and light to medium amber.

**Expected Cultural Response:** Tryptic Soy Broth Modified with Novobiocin & Acid Digest of Casein was inoculated with the test organisms listed below. These organisms were incubated at the appropriate atmosphere and temperature and examined for growth after 18 – 22 hours.

\*STEC Center: National Food Safety & Toxicology Center, Michigan State University, Department of Microbiology and Molecular Genetics. The organisms listed are the minimum that should be used for quality control testing. The organisms listed are the minimum that should be used for quality control testing.

## **Test Procedure**

Refer to appropriate references for specific procedures on the recovery of pathogenic *E. coli*.

## **Results**

Refer to appropriate references for test results on the detection and enumeration of pathogenic *E. coli*.

## **Expiration**

Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

## **Limitations of the Procedure**

Due to varying nutritional requirements, some strains may be encountered that grow poorly or fail to grow on this medium.

## **Storage**

Store sealed bottle containing the dehydrated medium at 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.
